Press Release

JetCorp Awarded Interior STC

JetCorp Technical Services recently received FAA certification on its first two Bombardier CRJ-100 conversions under their Renaissance Series program. As part of the overall program, both aircraft were converted from their original 50-passenger airline configuration to a completely new 15-passenger executive configuration. All work associated with the conversion projects, including engineering, avionics and maintenance; were completed at JetCorp's main facility at Spirit of St. Louis Airport in Chesterfield, MO. All interior components, including custom cabinetry, were fabricated and finished by the highly skilled team of JetCorp craftsmen and technicians.

With the successful completion of the first two aircraft, the Renaissance Series program has positioned JetCorp for consistent future growth and stability in the interior refurbishment, modification and conversion markets. According to Danny Farnham, President of JetCorp, response to the project has been overwhelming and he expects additional announcements regarding the Renaissance Series program and its further development to be forthcoming.

For Release 9 a.m. EDT, March 6th, 2009
